**Unbinding Transitions of Interacting Membranes.**  
REINHARD LIPOWSKY and STANISLAS LEIBLER [Phys.  
Rev. Lett. **56**, 2541 (1986)].

The quoted values for the phase boundaries of the critical unbinding transition as determined by a renormalization-group calculation contain an error. All quoted rigidity constants,  $\kappa$ , are too large by a factor  $\frac{1}{9}\pi^4 \approx 10.8$ . Thus, the values for  $\kappa$  which are given as  $(1-20) \times 10^{-19}$  J and  $(2-20) \times 10^{-19}$  J in the Letter should be replaced by  $(0.09-1.85) \times 10^{-19}$  J and  $(0.19-1.85) \times 10^{-19}$  J, respectively. This correction applies both to neutral and to charged membranes.
